New York, N.Y., 10017

Excellency,

Re: Renewable energy and global warming

I write to ask for your personal support for certain scientific work I have done showing conclusively that there is an economical and low cost way to not only control but to reverse the existing climate change, and to ask for your assistance to bring this work before the public.

I also wish to present for your perusal and ask for your support for work I have done in the fields of economics (employment and unemployment), medical imaging, computers (artificial intelligence, graphics, databases, and computer memory), energy (solar, nuclear and thermonuclear), and astronomy (principally planetary science).

A CD containing details of some of my other work, employment history, personal and business references, a psychological appraisal, police clearances, and news clippings about that work is available on request (site map attached). The personal references and psychological appraisal show that I am good at what I do and do not suffer fools or incompetents gladly. I have little time for bureaucracies, but have a very high regard for those in public administration, sometimes called "The Public Service".

No doubt you will want to know the basis of my claims, re: global warming. Technical details of the solution will be made available to you if we can reach an agreement to work together. Since it is pertinent, I am not a politician or an employee of any government or private enterprise organization (see resume).

You may now be asking yourself why I am approaching you.

On 16 March 2006 I sent an e-mail on the subject of solar energy, nuclear energy and global warming to members of the Australian Parliament. The Australian Prime Minister later announced a review of nuclear energy. The same e-mail was then sent to the members of the various Australian state parliaments to keep them informed.

The Australian authorities, however, have shown no interest in pursuing my work, or even discussing it let alone testing it. In private discussions some of the authorities I have approached have even said that they do not want to see some of these problems solved, hence my approach to you.

No doubt you would want to know what my proposal will cost. To address the global warming problem will require a.) introducing the solution to the public, and b.) an education program to capture the heart and soul of humanity. These will have costs associated with them. On the plus side, solving with this problem will result in greater wealth for all, particularly those who show leadership.

2/...

In the longer term, 20-50 years and onwards, it is self evident from my report that global warming isn't the most serious problem facing humanity. If countries refuse to recognize the nature and extent of that more serious problem then humanity has no future.

The environment will continue to deteriorate, unemployment will rise while education, medical care, law and order, and other social structures will break down*. As people become poorer they will buy fewer goods and services. The rich will then become poorer because their companies and industries will make fewer sales, and the world economy will enter a downward spiral.

If this process is left unchecked it will end in an economic collapse, plagues, floods, droughts, and eventually to a weak or an ineffective defence force and a takeover. In the worst case scenario civilization will collapse*. These are not just stories to frighten little children. There is evidence that this process has already started.

It has been put to me that it would not be proper to write to you. If you are offended, I apologize. I write because some scientists say that if action isn't taken to solve this problem nature is going to solve the problem, and nature can be brutal. It won't happen suddenly. It will happen gradually, and come on cats' paws, very quietly.

It would not be proper of me to not bring a solution to global warming, or any other global problem, to your attention.

Your response to the matters I have raised would be appreciated. If you would like to take them further please telephone or write to the address below. If you would wish me to present myself for your examination I am available at your convenience.

With respect,

George Blahusiak
