

ALUMINIUM SECTION

1000 SERIES SLIDING WINDOW

DESCRIPTION:

A heavy-duty aluminium extrusion for sliding windows. It can be either single or double sliding and features excellent sliding and drainage characteristics. All sliding tracks are replaceable onsite. An easily fitted PVC cover strip covers the fixings for a much cleaner finish. An internal fixing trim can be supplied if required to enable quick and attractive finishing of the inside of the cutout. The trim comes predrilled for fixings. The same PVC cover strip is used to cover the base of the screws.

APPLICATIONS:

This window is designed for larger sea going craft that require considerable strength and durable maintenance free operation. A mullion or transom extrusion is available to separate panels.

DIMENSIONING:

All dimensioning and radii are measured at the cutout or shoulder point.

STANDARD RADIUS:

100 mm.

SHAPE:

Any shape to template having straight edges and radiused or mitred and welded corners.

FINISH:

20 micron natural anodise or colours available on request.

GLAZING:

6, 8, or 10 mm toughened safety glass in clear, grey or green (8 mm only available in clear). Acrylic and polycarbonate glazing also available,

FIXING:

Frames come predrilled, 3/16" countersunk as standard, other drilling can be arranged on request.
